

Magnetide

Game roles: 2 magnetic robots

Robot skills:

- The magnetic force attracts another robot, then carries the other robot to move (It will slow down when it's sucked in.)
- Releasing the charge will launch your teammates away. (Distance depends on the degree of charge accumulation.)

Status	Benefits	Costs
Move separately	Move fast, more freedom	Unable to overcome certain obstacles
Move together	It can launch teammates higher or farther.	Slower speed, more cumbersome jumps or turns

Game buttons :

- P1: WASD for movement; Left shift for link/charge up launch
- P2: Arrow key for movement; Num pad 0 for link/charge up launch

Magnetic Link Mechanic:

- Robots can attract each other when they are nearby
- The robot that activates the magnetic pull becomes the leader and carries the other robot while moving.
- Moving together reduces movement speed and makes jumps heavier.
- The leader can hold the same magnetic button to charge a repulsive force.

Charge up and launch:

When the two robots absorb together, the player holds down another button to charge up:

- The charge bar gradually increases
- After releasing the button, the attracted robot will be launched in the designated direction.
- Charge up longer, fly farther
- There is a maximum charge/maximum launch distance to avoid being too extreme.

This is also suitable for use in levels:

- Launch onto the high platform
- Launch through the gap
- Launch off a platform that is beyond the jump distance.

Level Elements:

- Platforms
- Void falling and top respawn
- Keys and a locked exit
- High platform/gaps

Win Conditions:

- Both robots reach the exit/finish gate.
- If the level has a key, you must obtain the key first and open the finish gate.

Lose Conditions:

- Each level has a countdown timer.
- Time reset to zero → Lose Screen

Death Mechanism:

- Falling into the void **won't kill it**; it will **fall back** down from above.
- In two-player cooperative games, constantly dying will disrupt the rhythm.
